COMPLETE INDEX

Pages 158, 159 and 160

We have made large plantings this year but still some varieties are in short supply. It is a wise gardener who orders his seeds early.

David Burpee with the new Tetra Marigold, the first new flower created by the use of a chemical—colchicine. Tetra Marigold is what is known scientifically as a tetraploid.

For over 63 years Burpee has been supplying gardeners everywhere with their seed requirements and each year we strive to render better service. We want your garden, planted with Burpee's Seeds, to be an outstanding success. On our Seed Farms, varieties are selected and reselected, year after year, to give you the best that it is possible to produce.

Thousands and thousands of dollars are spent annually by us in research, experimenting, breeding and testing, so that you may receive seeds of the highest quality and vitality. And yet these seeds, Burpee's Seeds, cost no more than ordinary seeds. A few cents will buy a packet of flower seeds which will not only beautify your home surroundings but provide cut flowers for indoor decoration, and for very little money you can get a handful of seeds which will produce a garden full of vegetables. Where else can you buy so much of quality for so little! If you have not grown vegetables before, you don't know their real flavor. No vegetable can compare in flavor with those gathered in your own garden and cooked with as little delay as possible. What about your lawn? Is it well kept? Does it lend an air of distinction and refinement to your property? Burpee's Grass Seeds, special blends for different purposes, are clean, heavy and of the highest quality.

There are many new varieties of flowers and vegetables in this catalog. A new tomato for which we will pay $100 for a name is offered on page 97; on the same page we list the new Fordhook Pepper, Bronze Medal Winner in the All-America Selections for 1940. Read about the New David Burpee Zinnias on page 4; Tetra Marigold on page 8—the first new flower created by the use of a chemical; Cream Star Petunia, page 3, Silver Medal, All-America Winner for 1940, and many other marvelous new Burpee introductions for your garden will be found throughout this Book.

For the Best Seeds that Grow, whether it be the good old standbys or entirely new varieties, you can depend upon Burpee. We would greatly appreciate your order. May we hear from you soon?

Faithfully yours,

David Burpee

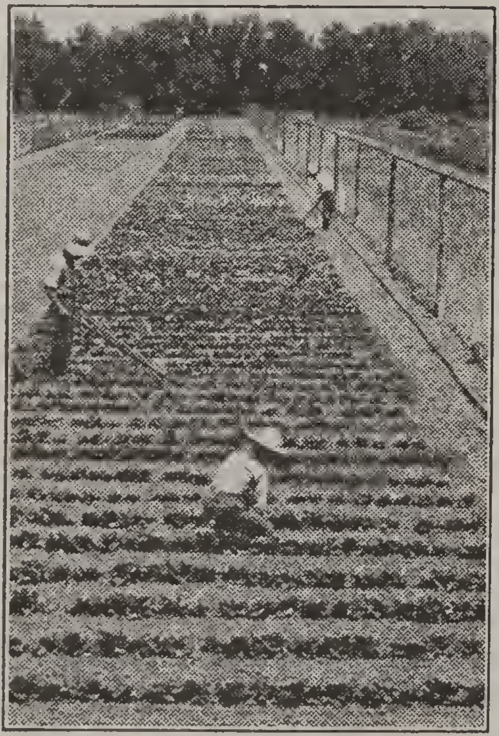
Floradale Farms—the best plants are carefully selected and "caged" to furnish seed for the next year's sowing.

Burpee's
Experimental Grounds and Famous Seed Farms

At Burpee's Fordhook Farms, near Philadelphia, and Floradale Seed Farms, Lompoc, California, a vast amount of experimental work is carried on each year to improve existing varieties of vegetables and flowers and to create new ones. Pages could be written of the work we have accomplished.

On Fordhook Farms many special strains are produced, in addition to which a large acreage is utilized mostly for growing, testing and insuring the trueness-to-type of all the seeds we send out.



Fordhook Farms—every variety of seed that we sell is tested for purity and vitality.

At Floradale Farms plants grow to perfection under ideal climatic conditions—mild winters and long, cool, dry summers are favorable for the production of the Best Seeds that Grow. Here, too, is carried on an intensive breeding program as well as much experimental work—all to give you seeds of the Highest Quality and Vitality.

Burpee's Seeds are grown where conditions are most favorable for producing the best seeds. They will grow to perfection wherever they are sown. Burpee's New Dwarf Compact Petunia

2426 **Cream Star**

Silver Medal Winner, All-America Selections for 1940

Plants have the finest dwarf, bushy habit ever seen in the nana compacta group of petunias. When full grown, they are 12 in. high and 14 in. across, neatly rounded and completely covered with flowers over the sides and top. Perfectly uniform; every plant is of the same size and habit, and all plants produce flowers of the same color and form. Cream Star Petunia, entered in competition with many other new flowers, received the highest rating by the judges of the All-America Selections for 1940. To receive such a high honor, a flower must be good; we can fully recommend it.

Flowers grow 2¼ in. across and are shaped like a five-pointed star; soft, creamy white deepening towards the throat to a bright golden yellow. The entirely distinct color of the flowers, together with the uniform, compact habit of the plants and their profusion of blooms, makes Cream Star Petunia ideally suited for low beds, borders and edgings. Plants come into bloom about 20 weeks after the seed is sown and they will continue to bloom profusely until frost. **Pkt. 25¢; 2 pkts. 45¢; 5 pkts. $1.00.**

Heavenly Blue Scabiosa

Burpee's New Scabiosa

2624 **Heavenly Blue**

Bronze Medal Winner, All-America Selections for 1940

The first of a new group of annual, large-flowered double scabiosas. Plants are medium tall, coming in between the talls and the dwarfs, their average height being 2 ft. Flowers are round, soft azure-blue, and borne most profusely on long, strong stems well above the foliage. Blooms from midsummer until frost if flowers are not allowed to go to seed. Pretty in beds and borders; highly prized for cutting.
Pkt. 25¢; 2 pkts. 45¢; 5 pkts. $1.00.

2878 David Burpee Zinnias

Surpass all other zinnias in size, form, and assortment of colors

David Burpee Zinnias represent the greatest advance in large-flowered zinnias since the introduction of the Dahlia-flowered type twenty-five years ago. The flowers are of a form never before seen in zinnias; they may be likened to a large-flowered chrysanthemum, so attractively curled and quilled are the petals. The petals curl backwards so that only the colorful upper side is exposed and the dull underside is entirely hidden.

The size of the flowers is tremendous, and not only are they extremely broad, but they have a depth which is not found in any of the other large-flowered forms. Flowers measure up to 6 in. across and from 4 to 5 in. in depth, with cutting stems averaging 18 in. in length. The quilled form of the flowers makes them exceptionally good keepers, and they will last in good condition for well over a week in water when cut.

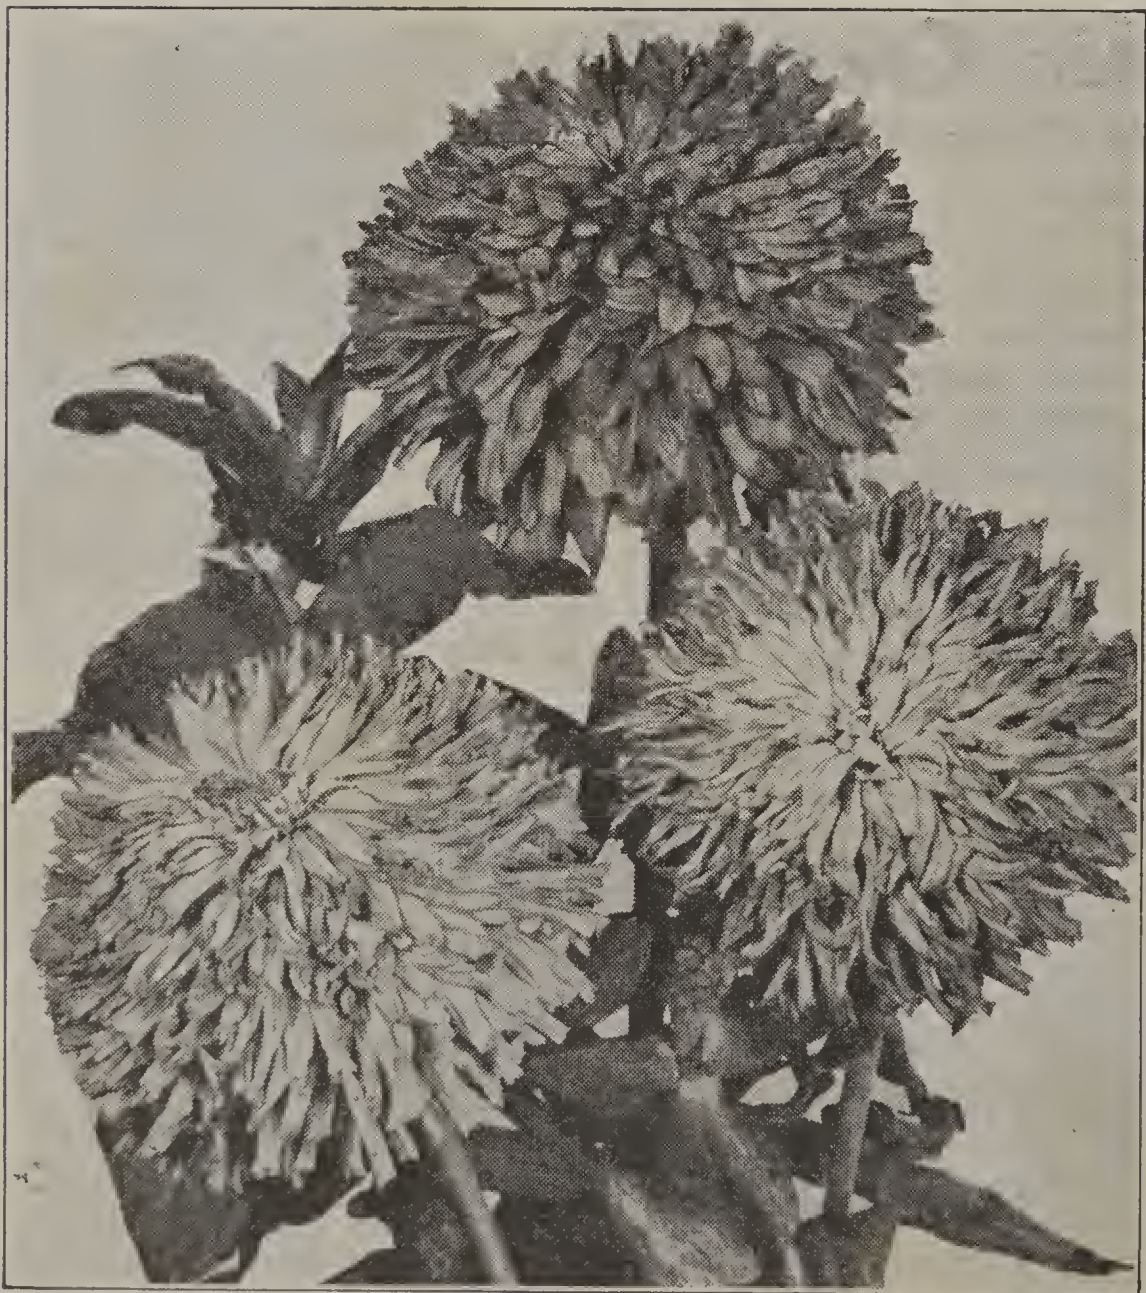
The men on the Floradale Seed Farms thought so much of this new kind of zinnia that they insisted on naming it for the president of this Company. He and the zinnias are shown above.

Another outstanding feature of these zinnias is the unusual range of colors, many that have never been seen in zinnias before. Pastel shades predominate, such as apricot, soft cream, chamois, buff, terra-cotta, burnt orange, soft rose, and peach. Some flowers are of solid colors while others are delightful combinations of exquisite blendings of two and three colors. Some of the colors are shown on the front cover of this catalog.

The plants grow about 3 ft. tall and are different from those of any other zinnia. The seed grows just as well as any, but the plants in the young stage are a little slow in getting started. Once, however, they get their roots well into the ground, they make a most amazing growth—more vigorous and taller than most zinnias. Some of the plants have leaves which are curiously curled and quilled like the petals of the flowers. The plants with the most extremely curled leaves usually bear the most attractively formed flowers. Those with the plain leaves bear flowers which are not so extremely quilled as the others, but are large and beautiful. The color of the foliage is of a deep, rich green and is somewhat mildew resistant.

These zinnias have a fine pedigree. They are a development out of Luther Burbank's Zinnias, the result of a mutation which occurred several years after Mr. Burbank's death. Their size, shape and wide range of soft delicate pastel colors that you never dreamed could be found in this popular garden flower make them most desirable for garden use and cutting.

Pkt. (40 seeds) 25¢; 90 seeds 50¢; 200 seeds $1.00; 1000 seeds $5.00.



David Burpee Zinnias are truly outstanding

New Tetra Marigold

2193 Tetra Marigold

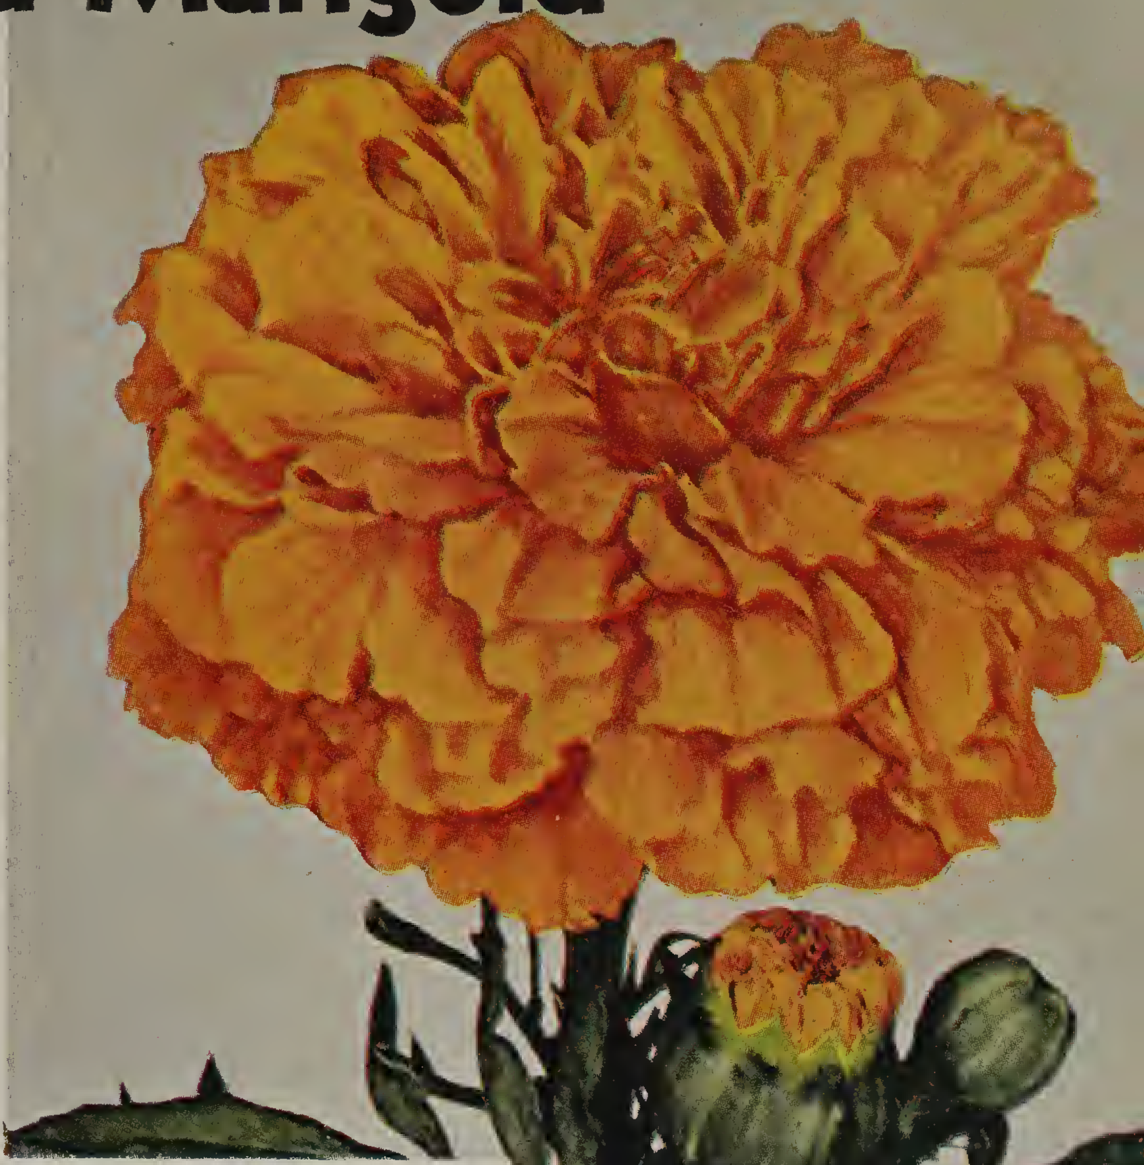
The first flower produced by the use of chemicals. Tetra is what is known as a Tetraploid Marigold.

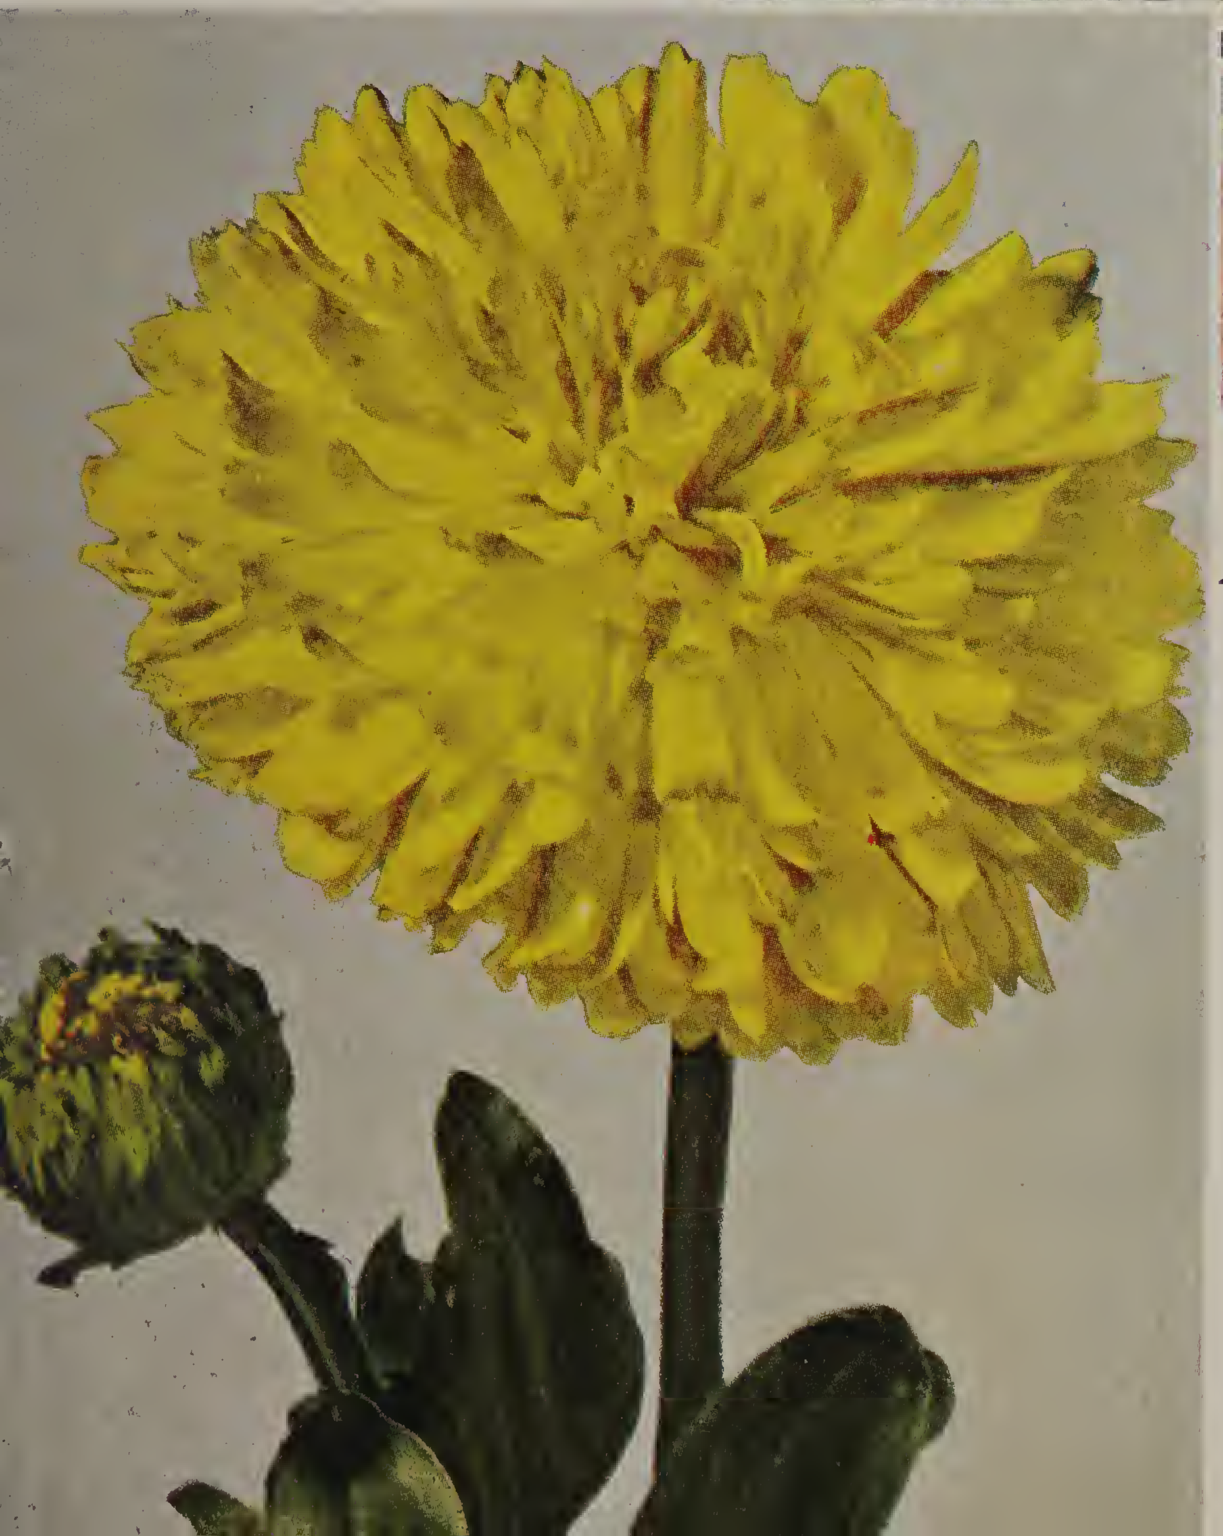
Colchicine, the powerful chemical made from the fall crocus, was applied to Guinea Gold Marigold. It caused the doubling up of the cell contents and this new marigold consequently is extremely big and strong growing. It is a "Tetraploid."

Flowers are large, 4 in. across, deep golden orange, and freely borne on plants that are much more robust than other marigolds. The main stems are exceptionally thick and heavy; plants grow 2½ ft. tall and have the usual marigold odor.

Its robust growth and heavy, dark green foliage make Tetra Marigold especially suited for borders and bedding. Tetra is a flower of most artistic form; nice for cutting.

Pkt. (75 seeds) 25¢; 175 seeds 50¢; 400 seeds $1.00.





1734

New Yellow Colossal ← Calendula

In addition to being the biggest calendula in the world, Yellow Colossal is the most profuse blooming of all large flowered varieties. The beautiful, clear, bright yellow flowers grow 4½ in. across.

The well-formed, bushy plants grow 18 in. high and are loaded with flowers so that it is most suitable for use as a bedding variety. Showy in the garden and especially desirable for cutting.

Yellow Colossal is bigger and better than Sunshine — the flowers are larger, more fully double, more compact and of better form; the outer petals are long, loose and gracefully curved.

Pkt. (100 seeds) 25¢; 225 seeds 50¢; 500 seeds $1.00.

2323 New Giant Double Nasturtium Fiesta

A gayly colored big nasturtium. When young, the flowers are bright golden yellow blotched scarlet at base of petals; as they age, the scarlet suffuses over the face of the flower. This variance in coloring is most striking and changes considerably in different flowers on the same plant at the same time.

Flowers are semi-double, 2¼ in. across, and are borne profusely on long, strong stems high above the foliage. Their long stems and sweet fragrance make them highly prized for cutting. Plants are of strong, vigorous growth, 15 in. high, and spreading about 3 ft. across. Splendid for beds and wide borders.

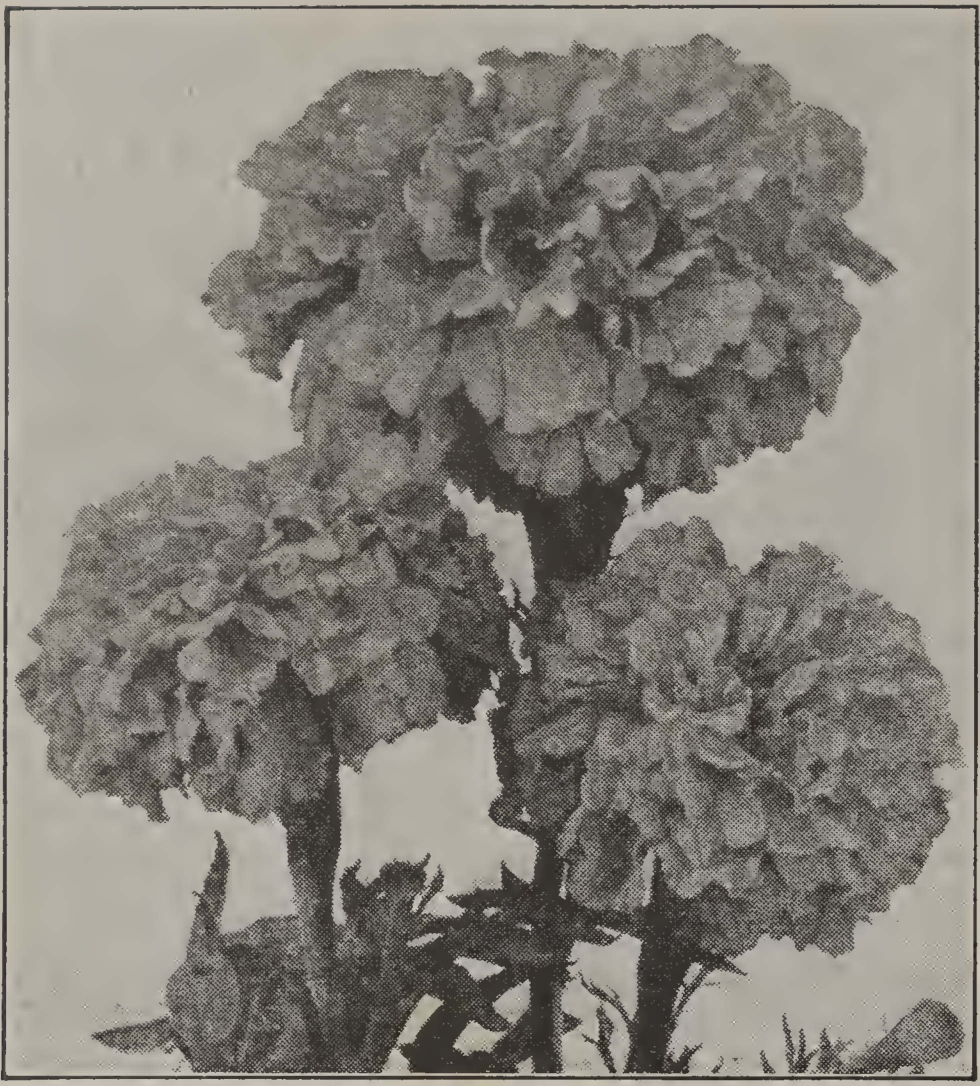
New Larkspur, Glitters



Tetra Marigold (top) in comparison with Guinea Gold (below)

New Giant Marigold

2193 Tetra

Tetra Marigold is the first flower to be produced for cultivation which was developed by doubling the chromosome number through artificial means. This was done by using a drug known as colchicine. Tetra is the result of the doubling of the chromosomes of the popular Guinea Gold Marigold. Since a plant in which the chromosome number is doubled is technically known as a tetraploid, we have named this new marigold "Tetra."

The flowers of Tetra have the same attractive carnation-flowered form as Guinea Gold, but are much larger, 3½ to 4 in. across, and of a very deep orange color. The petals are frilly and possess unusually heavy substance so that the flowers have excellent keeping qualities. Some idea of the size of Tetra in comparison with Guinea Gold may be had by looking at the picture to the left.

Plants grow 2 to 2½ ft. tall and have much greater vigor than other marigolds. The main trunk and branches are very thick and heavy; the leaves are broad and leathery. The flowers are borne profusely over the top of the upright plants. Many of the branches have a cluster of 6 or 8 flowers at the end so that a single branch when picked would make a bouquet. Showy in beds and borders; wonderful for cutting.

Tetra begins blooming in about 19 weeks from seed. If you wish to have a long season of bloom, we suggest that you start seeds early indoors. Tetra is as easy to grow as any marigold; don't miss this distinctly new variety.

Pkt. (75 seeds) 25¢; 175 seeds 50¢; 400 seeds $1.00.

Giant Pacific Delphiniums

Tall, slender, graceful flower spikes of very large and well-formed florets. Many of the plants are highly resistant to mildew. Fine for cutting; valuable in perennial beds, tall borders or backgrounds. 4 to 5 ft. high.

4092 **King Arthur Series** Flowers are large, up to 2¾ in. across; deep blue and blue-violet tones with prominent white centers, which makes them most attractive.

4094 **Lavender Shades** Beautiful light lavender-blues and pure lavender shades with white "bee." Strong spikes.

4093 **Summer Skies Series** Very large flowers of clean, pure, pleasing shades of azure blue, light and deep sky blue. Soft and refined. One of the most pleasing.

4095 **Dark Violet Shades** As the name implies, the large flowers are of the dark violet shades with both light and dark "bees." Double flowers of good form.

4091 **Clear White** Very long spikes of large, pure white flowers up to 3 in. across. Most impressive and desirable.

Any of the above: **Pkt. 35¢; 1/32 oz. $1.00.**

New Dwarf Double California Poppy

2065 Sweetheart

New color and distinct plant habit in Eschscholtzias. Flowers are extremely double, 2 in. across, with petals so beautifully crinkled and fluted as to give them the appearance of double begonias. The color is a most gorgeous, flaming, rich rose on cream ground, lighter on the inside of the petals than the outside, so that many attractive bicolor effects are produced. Plants are bushy, dwarf and somewhat erect, 8 in. high and 15 in. across, with none of the branches showing any tendency to trail or break apart. They are most rugged and free blooming. Flowers completely cover the plants over a very long period of time. Marvelous plant habit, pretty flower form and pleasing color all combine to make Sweetheart one of the best California Poppies.

2271 Burpee's Red and Gold Hybrid Marigolds

are Hybrids between African and French Marigolds; some flowers are solid red while others are delightful combinations of red and gold. The color varies with the season—at times it becomes almost pure golden yellow and at other times a bright rich mahogany-scarlet. Flowers are extremely double and nearly three times the size of the largest French Marigold.

These Red and Gold Hybrids are the earliest of all Marigolds; will come into flower in eight weeks from seed. They are the most profuse blooming and continue to bear over a longer period of time than any other Marigold. Plants have bloomed continuously for more than seven months in the open garden. 1½ ft. tall, 2 ft. wide and covered with flowers at all times.

Pkt. (60 seeds), last year's value 25¢, for only 10¢; 150 seeds 25¢; 300 seeds 50¢; 600 seeds $1.00.

2271 Burpee's Red and Gold Hybrids

Hybrids Between African and French Marigolds

Created on Burpee's Floradale Seed Farms

The flowers of Burpee's Red and Gold Hybrids grow 2½ to 3 in. across. Some are solid red with a brilliance never before seen in marigolds; others are delightful combinations of red and gold. The flowers vary in color according to season and even in different flowers on the same plant at the same time. At times they are almost pure golden-yellow and at other times mahogany-scarlet.

Burpee's Red and Gold Hybrids are the liveliest colored and most outstanding of all marigolds. They are extremely double and nearly three times the size of the largest double French Marigold. They are the earliest of all marigolds, as they come into bloom in less than eight weeks from seed. The plants are more profuse blooming and will continue to flower over a longer period of time than any other marigold; in fact, they have flowered continuously for more than seven months in the open garden. Grow 1½ ft. tall, 2 ft. wide.

Burpee's Red and Gold Marigolds are hybrids between the African and French Marigolds and for this reason a few African Marigolds of an orange color will appear in any planting. These African Marigolds can be distinguished from the hybrids before the plants are ½ in. high by the green color of their stems; the hybrids have red stems.

Pkt. (60 seeds), last year's value 25¢, for only **10¢;**

Carnation Flowered Marigold, Golden West

Chrysanthemum Flowered

2308 **Shaggy** This unique marigold takes its name from the distinct "shaggy" appearance of its large, ball-shaped, deep golden yellow flowers, which grow 3 in. or more across. They are borne singly or in clusters of 2 or 3 on the ends of long branches. The strong, vigorous plants have a neat, upright, bushy habit of growth, 24 in. tall and 20 in. wide; begin blooming in 15 weeks and continue profusely until frost. **Pkt. 20¢; ⅛ oz. 60¢; ¼ oz. $1.00.**

2311 **Orange Delight** An extremely deep orange, the deepest coloring known in African Marigolds. Flowers are round, pompon-like, and are made up of a multitude of attractively curled and interlaced petals. The blooms grow 2½ in. or more across, the first ones appearing in about 20 weeks after seed is sown. Plants grow 3 ft. high. Start seed indoors. **Pkt. 15¢; ⅛ oz. 50¢; ¼ oz. 85¢.**

2312 **Golden Sunshine** Bright golden yellow chrysanthemum-like flowers with finely curled and interlaced petals. Round, pompon-like flowers, 2½ in. across, are borne on long stems desirable for cutting. The vigorous plants, 3½ ft. high, come into bloom in midseason, about 21 weeks after the seed is sown, and continue until frost. Start seed indoors. **Pkt. 15¢; ⅛ oz. 50¢; ¼ oz. 85¢.**

2297 **Early Sunshine** ***Bronze Medal Winner, All-America Selections*** Flowers have the attractive form of Dixie Sunshine, but are considerably larger, growing 2½ in. across and 1½ in. deep, and, best of all, they are extremely early. Blooms are had in 15 weeks from the time the seed is sown, so that even in the most northern states, where summers are short, Early Sunshine will provide great numbers of flowers for many weeks. Plants grow 2 ft. tall and produce their cheerful, bright lemon-yellow flowers most profusely. **Pkt. 15¢; ⅛ oz. 50¢; ¼ oz. 85¢.**

2221 **Dixie Sunshine** Clear, bright yellow, long-stemmed double flowers, about 2½ in. across, composed of small, five-pointed florets that are interlaced in such a manner as to give them the appearance of a pompon chrysanthemum. Upright grower, 3 ft. tall. Late-flowering; start seed indoors. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

2281 **Chrysanthemum-Flowered Mixed** Beautiful flowers of different chrysanthemum-like shapes, varying in size from 2 to 3 in. in diameter and from the deepest red-orange to bright yellow. 1½ to 3 ft.; early, midseason and late flowering. **Pkt. 10¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

2174 Limelight (*New*)

Bronze Medal Winner, All-America Selections for 1940

The lightest in color of all marigolds—a very soft primrose-yellow. Flowers grow 2¾ in. across, and are made up of hundreds of artistically curled and interlaced petals to form a most exquisite pompon chrysanthemum-like head. Dwarf, bushy plants, 20 in. high. Begin to bloom in 17 weeks from seed; continue profusely until frost. **Pkt. (100 seeds) 25¢; 225 seeds 50¢; 500 seeds $1.00.**

Carnation Flowered

2295 **Golden West** Earlier blooming, larger flowered, dwarfer growing, and more floriferous than Guinea Gold. Plants start to bloom in 15 weeks after seed is sown. Flowers grow 3½ in. or more across, with petals loosely and gracefully placed. Plants grow 2½ ft. tall, and as they branch freely from near the base, the stems are quite long and borne so profusely that the plants are literally covered with deep orange flowers until killed by frost. Much like Burpee Gold marigold except that Golden West has foliage with the usual marigold odor. Its earliness will be especially appreciated in sections where seasons are short. Long-keeping cut flower. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

2294 **Burpee Gold** Earlier blooming, larger flowered, dwarfer growing, with more flowers than Guinea Gold, and, above all, **foliage is entirely free of the usual marigold odor.** Glorious deep orange double blooms. 3½ in. across, with the long petals loosely and artistically arranged. Plants grow 2½ ft. tall, begin blooming in 15 weeks, and continue most freely until frost. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

2277 **Tom Thumb, Golden Crown** Dwarf or Tom Thumb form of the popular Guinea Gold; plants grow about 10 in. high. Flowers are large, golden orange, and borne abundantly above the lush green, fine-leaved foliage. Especially suited for borders or bedding; nice for cut flowers. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

2180 **Guinea Gold** Brilliant orange carnation-like flowers flushed with gold. The first marigold of this type to be introduced and still very popular. **Pkt. 10¢; ¼ oz. 30¢; ½ oz. 50¢.**

Hedge or Border Marigold

2307 **Spanish Gold** A new and distinct habit of growth in marigolds called "Hedge or Border"—every plant is identical in habit, height, breadth, extremely bushy, with a flat top and straight sides so that a row of these plants gives the appearance of a neatly trimmed hedge, 20 in. high and 30 in. wide. When in full bloom, the entire top and sides of the plants are covered with deep glowing golden orange flowers, which grow 3 in. across and somewhat resemble carnations but differ in that the petals are delightfully ruffled and slightly fluted. Flower stems are long and ideal for cutting. Blooms in 20 weeks from seed and continues to flower profusely until frost. Start seed indoors for earliest blooms. **Pkt. 15¢; ⅛ oz. 50¢; ¼ oz. 85¢.**

2915 **Giant Marigolds and Giant Zinnias, Mixed** One of the loveliest garden combinations you have ever seen; also lovely mixed as cut flowers. We are sure you will like this mixture.

Plants grow 2 ft. tall; begin to bloom in 17 weeks from seed and continue till frost.

CALENDULAS—Scotch or Pot Marigolds

Calendula, Orange Fantasy

It is marvelous to see how plant breeders have improved the old-fashioned calendula that was grown generations ago. The beautiful varieties offered on this page, except where noted, are extra large-flowered and double to the very center. Where summers are not too hot, plants will bloom from early summer until frost, and furnish an endless supply of long-lasting cut flowers. Calendulas are of easiest culture, succeeding in ordinary well-drained soil. Sow any time during the spring and early summer. 15 to 24 in. tall, depending on the variety.

BURPEE'S EXQUISITE PETUNIAS

Petunias are among the most satisfactory annuals for garden display. They succeed in ordinary, well-drained garden loam such as will grow a good crop of vegetables, and in a location where they receive plenty of sunlight. Do not plant in soil that is overly rich. Some types are especially suited for bedding and pot culture, others are ideal for edgings and mass plantings, while others are unexcelled for porch and window boxes; all are excellent for cutting. The freedom with which the charming blooms are produced throughout the growing season is truly amazing.

Spreading Bedding *(Petunia hybrida)*

Giant Ruffled Petunias

(Petunia hybrida grandiflora superbissima)

Burpee's Giant Ruffled Petunias are unsurpassed for bedding, borders, cutting, and most valuable for porch and window boxes as well as for pot culture. The flowers, with their large, wide-open throats, are deeply ruffled, artistically veined, and, when well grown, often measure 5 to 7 in. across. They are ready sellers with those who grow pot-plants for sale; marketable flowering plants can be had in four months from the time of sowing the seed. Plants bloom until frost.

Seeds are quite small and most valuable. Sow them carefully indoors in pots or shallow boxes filled with equal parts of good garden loam and leaf mold to which has been added a generous quantity of fine clean sharp sand. Make sowings about eight weeks before your usual outdoor planting time. Plants may be set in the open ground where they are to remain after soil has become warm and all danger of cold weather is past. Easily grown if directions on the seed packages are carefully followed.

Delightful, Single Flowered, Erect Growing

Burpee's Famous Zinnias

The value of zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They are one of our leading specialties.

Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted. Plant in full sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in midsummer and continuing until fall. Flowers last for days when cut; different size flowers and colors for every purpose. After the soil has become thoroughly warm, sow seed in the open ground where plants are to bloom. Thin out large flowered varieties to stand 2 ft. apart; smaller flowered types, 1 ft. Zinnias will bloom in about two months. All the different classes of zinnias are easy to grow.

Giants of California

Immense double flowers, 5 to 6 in. across, of a distinctive shape that is most graceful and desirable. The overlapping petals are more loosely placed than in the Dahlia-flowered type of zinnia, and the flowers themselves are more flattened, being only about 1 in. in depth. The vigorous, well-branched plants grow about 3 ft. tall and produce many long, strong flower stems. Ideal for cutting; attractive in beds and borders.

3184 **Brightness** Deep rose. A fine variety which combines well with Golden Queen or Daffodil. Very full and of perfect form.

3183 **Cerise Queen** Beautiful flowers of a luminous cerise-rose shade. Widely grown.

3185 **Daffodil** Distinctive shade of bright canary or daffodil yellow. Exceptionally nice.

3190 **Enchantress** Light rose with a dark rose center. A truly enchanting two-toned color combination which produces a most charming effect.

3192 **Golden Queen** (Lemon Queen) Delightful shade of lemon-yellow with a distinct golden cast.

3196 **Grenadier** Rich, glowing dark red. A vivid yet unobtrusive color. Especially fine for exhibition.

3197 **Lavender Gem** Deep lavender, turning to a warm purple as the flower matures. Very artistic shade.

3191 **Miss Willmott** Lovely, delicate, yet warm, soft pink, deepening somewhat as flowers age. Pleasing shade.

3187 **Orange King** Rich cadmium or orange-scarlet flowers of remarkable brilliance, many two-toned.

3186 **Purity** Most outstanding for its pure white color and perfect finish. Splendid alone; lovely with all colors.

3188 **Rose Queen** An exquisite flower of pure, clear, rose color. Most desirable. Radiant, soft, and refined.

3198 **Salmon Queen** Salmon-rose flowers of unusual beauty; a particularly attractive zinnia for cutting.

3189 **Scarlet Gem** A gem in the true sense of the word. Glowing scarlet. Very striking in solid masses.

3199 **Violet Queen** Marvelous flowers of a wonderful shade of deep purple; beautiful under artificial light.

Colors run through lilac, lavender, russet, crimson, orange, yellow, pink and other pastel shades. The many bicolored blooms remind one of the lovely, vivid colorings to be found in a Navajo rug. Cosmos

Beautiful summer and fall blooming plants; decorative in the garden and wonderful for cutting. Always popular, but more so now than ever, no doubt due to the introduction of the early midseason type a few years ago, followed by the beautiful yellow cosmos and Mammoth Sensation. Plant as many varieties as space will permit, for a garden is incomplete without this lovely flower. They are old favorites, a constant expression of friendliness, happiness, and memories. One of the easiest to grow.

Sensation (*Mammoth Flowering*)

Giant flowers, 4 to 6 in. across, are had within 10 weeks from seed and are borne most profusely until frost on strong, robust plants, 4 to 6 ft. high. Flowers have prettily fluted petals which slightly overlap. They are borne on long strong stems so desirable for cutting. Larger flowers, if wanted for exhibition or other purposes, may be obtained by disbudding.

Double Crested Cosmos

Improved Larkspurs

One of the most beautiful and desirable **annuals** for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty.

The culture of annual larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure. As they like cool weather in which to germinate and to grow best, seed should be sown as early in the spring as the ground can be worked—the earlier, the better, but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin to stand 1 to 1½ ft. apart.

BURPEE'S GLORIOUS ASTERS

A continuous display of asters from early summer until frost can be had by planting early, midseason, and late varieties. If you plant some very early varieties, we suggest that you have seedlings of later flowering ones or other flowers coming along to take the place of the earlies when they are through blooming.

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine, and ample moisture. They begin to bloom in 14 weeks to four months after seed is sown, varying according to type and climate. For earliest blooms sow seed indoors in boxes or pans six weeks before your usual outdoor planting time.

*** Varieties marked with an asterisk (*) are the Wilt-Resistant Strain. They are highly immune to "Wilt disease" or "Stem-rot."**

*Giant Branching Aster, Scarlet Rose**

Giant Branching

American, Semple's or Vick's Branching

From midsummer until frost these asters will produce a profusion of beautiful flowers. The blooms are quite large, 3½ to 4 in. across, and fully double. The plants grow 2 to 3 ft. tall and branch freely, producing stems frequently 2 ft. long, which makes this class especially fine for cutting. Nothing could be more dazzling than a blaze of color such as these giant flowers will give.

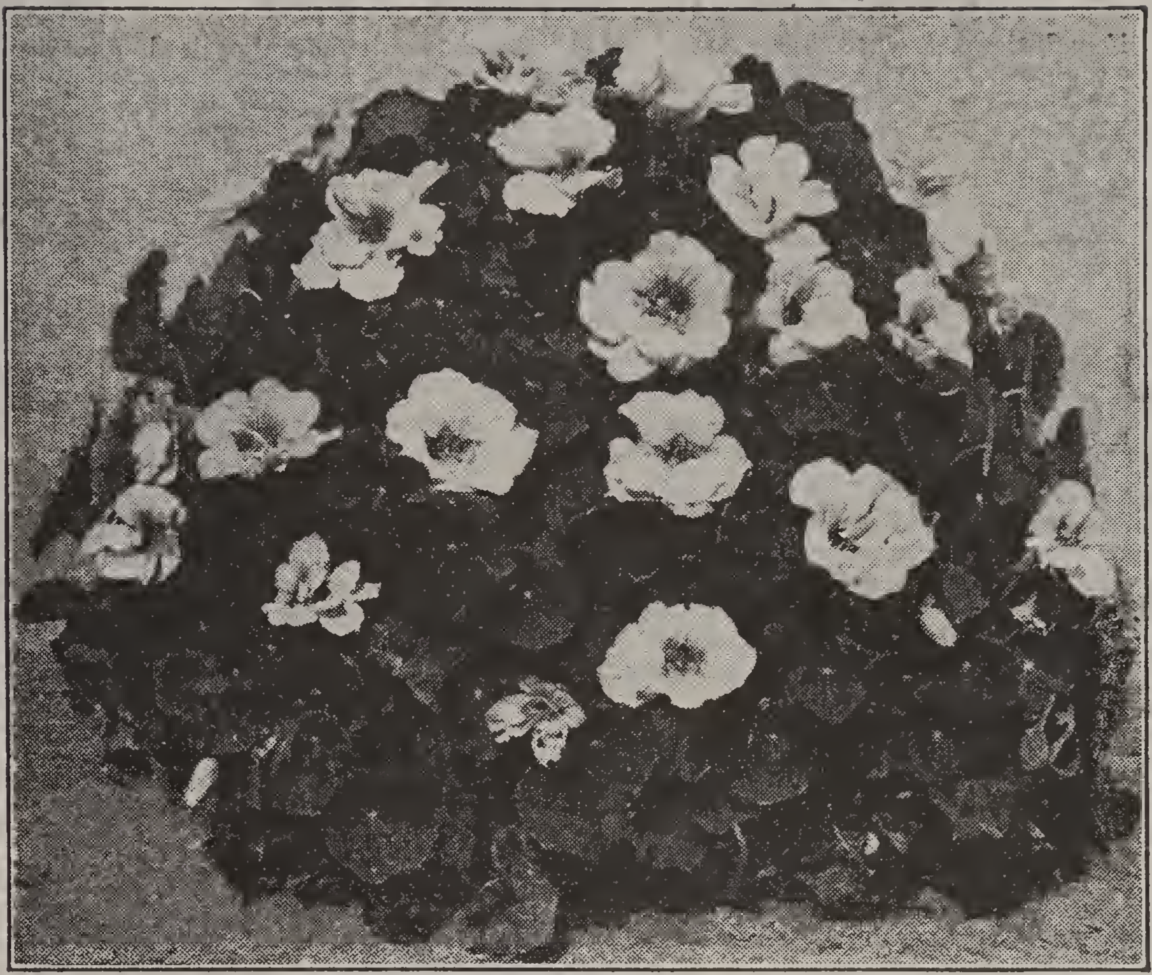
Giant Double Nasturtiums

Dwarf or Globe Plants

The plants of Burpee's Dwarf Double Nasturtiums are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double, sweet-scented flowers are produced most freely on very long stems; they are fine for cutting. The irregularly placed petals give the blooms an unusually artistic appearance. The dwarf, rounded plants are most attractive for beds, edgings, rock gardens and pot culture.

2337 Sun Ball

Flowers are soft, creamy yellow, in perfect harmony with the very dark green foliage. Plants are somewhat dwarfer, more compact and more bushy than other varieties in this group; they are very neat and free flowering. Long-stemmed, sweet-scented, large flowers. **Pkt. 25¢; 2 pkts. 45¢. 5 pkts. $1.00.**



New Dwarf Double Nasturtium, Sun Ball

2306 Delightful Soft salmon-cerise, the upper petals prettily marked crimson maroon at the base, and as flowers age, they often take on a deeper shade of salmon-cerise than the lower petals. Unsurpassed for cutting as the stems are exceedingly long and strong; flowers are held well above the luxuriant, bright green foliage of the neat, well-rounded, dwarf plants. **Pkt. 20¢; oz. 60¢; 4 ozs. $1.75.**

2336 Garnet Gem Striking color—deep, rich, very bright garnet-red with just enough orange to enliven it with an iridescent glow. Flowers are double or semi-double, with 8 to 10 petals, and grow about 2½ in. across. Long stemmed and delightfully sweet scented. **Pkt. 25¢; 2 pkts. 40¢; oz. 75¢.**

2329 Golden Globe Exquisite, giant double and semi-double, pure golden yellow fragrant blooms of the same color and shape as Golden Gleam, but the plants are dwarf, globe-shaped and bushy. Award of Merit in the All-America Selections. **Pkt. 10¢; oz. 25¢; 4 ozs. 75¢.**

2305 Orange Glory The large, sweet-scented flowers are bright orange; the base of each of the upper petals and most of the inside of the throat are painted with deep garnet-brown. Narrow lines of this latter color radiate like a fan out over the upper petals, but disappear in an overlay of orange-chrome. Petals are wonderfully fluted and crinkled. Plants are of the true dwarf or bush form. **Pkt. 20¢; oz. 60¢; 4 ozs. $1.75.**

2348 Primrose Gem The dwarf, compact plants are literally covered with giant double, sweet-scented, soft primrose colored flowers. Bushy, uniform, globe-shaped little mounds above which the flowers are borne on long, strong stems. **Pkt. 25¢; 2 pkts. 40¢; oz. 75¢.**

The new 40- to 60-petaled Super-Double Nasturtium found in Burpee's Double and Super-Double Mixture

2334 Burpee's Double and Super-Double Mixed Nasturtiums

These New Hybrids were created by a combination of mutations and cross-pollinations between Burpee's Super-Double and Burpee's Double Hybrid Nasturtiums. Seed of this wonderful mixture will produce various types of flowers; some will be semi-double, like Golden Gleam, others will be Super-Double, like the illustration opposite. Burpee's Super-Double Nasturtiums (*Tropaeolum majus Burpeeii*), when fully open, resemble greenhouse carnations.

Plants are vigorous and produce an abundance of large, sweet-scented flowers, 3 in. across. The Super-Doubles have as many as **40 to 60 true petals,** and the double hybrids have 8 to 10. Extreme doubleness and unusually large size of the flowers constitute two of the most important characteristics of the Super-Double type. Stems of the Super-Doubles are thicker and the plants sturdier and more vigorous than other nasturtiums.

Burpee's Super-Double is the only **Nasturtium** to be given a **Plant Patent.** Plants grown from our Double and Super-Double Mixture seed are protected by **U. S. Plant Patent No. 141.**

Packet of 10 seeds for $1.50; 3 packets for $4.00.

Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions on every packet. Burpee's Early Flowering Sweet Peas are offered on the next two pages.

Burpee's Early Flowering Sweet Peas

Varieties are arranged in each color class from deep to light shades

Burpee's Early Flowering Sweet Peas come into bloom 3 to 4 weeks earlier than the Summer Flowering varieties offered on pages 64 to 69. They are especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North, and also valuable for winter flowering under glass. They are being planted more and more every year.

If you live in a locality where the late Sweet Peas have not done well for you, try some Early Flowering. They will bloom before the summer heat arrives. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep rich soil which must be well drained.

Saintpaulia (African Violet)

The adaptability of perennial flowers for various purposes makes them essential and permanent features of every garden.

Perennial Flower Seeds

Perennial Flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the lovely, dainty Rainbow Rock Cress (Aubrietia), Golden Alyssum, Siberian Wallflower, Columbine, and many others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. The Burpee leaflet, "Perennials from Seed," will be sent **free** upon request.

Average heights and blooming season are given in the description for each class; some variation is natural in different localities.

Hardy Garden Lilies

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfer ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture.

BURPEE'S DAHLIA ROOTS

Jersey's Beauty

Each year on our Fordhook Farms we try out hundreds of varieties of dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we ourselves have created. Whether you select the massive Decorative, the lovely Cactus, or the small Pompon varieties, you will be delighted with the results. We supply **strong root divisions** from field-grown clumps.

The American Dahlia Society has adopted a classification for all dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs. Thus:

F. D. = Formal Decorative; I. D. = Informal Decorative; C = Cactus; S. C. = Semi-Cactus.

1118 Burpee's New "Nameless" Tomato

$100 for a Name

Burpee's New Nameless Tomato

A distinct, new, all-purpose tomato—a new and different type of fruit on a new kind of vine. The plant is short stemmed and bushy, but with no self-topping tendency. The leaves are small and set closely together, dark green, thick and firm in texture, forming a dense mass of foliage which virtually hides the fruit, especially in center of plant.

The fruit, unusual in that it combines large size with deep globular form, averages 7 to 8½ ozs. and maintains its size well throughout the season. The shoulder is smooth, there is little or no depression at the stem end, and the scar is quite small—in other words, it is refined in spite of its size. The color is bright scarlet, uniform, and attractive. Slice Burpee's New "Nameless" Tomato and you will marvel at the structure and firmness of its interior. Flavor? As good as Marglobe, and that's a high compliment. Ready in 75 days from setting out the plants. **100 seeds 10¢; 300 seeds 25¢; 1,500 seeds $1.00.**

$100 **To anyone, except Burpee employees, who sends us the name which our judges select for this tomato, we will gladly pay $100.** Names must be received by us not later than midnight September 10, 1940; award will be made on or before October 15, 1940. The decision of the judges will be final. No entries will be returned or acknowledged. All entries will become the property of W. Atlee Burpee Co. This contest will be subject to all national, state and local laws and regulations. Name selected, with winner's name and address, will appear in our 1941 seed catalog. In case of tie, duplicate awards will be made.

840 Burpee's New Fordhook Pepper

All-America Bronze Medal Winner for 1940

In this pepper we believe that we have combined thickness of flesh and desirable shape with earliness, productivity, and adaptability to every part of the country. It most closely resembles California Wonder but is a week or ten days earlier in Southeastern Pennsylvania, and farther north this valuable characteristic is intensified. It is remarkably productive, setting an unbelievably heavy crop of peppers under almost any conditions. Plants are 15 to 18 in. tall, erect, bearing fruits upright in large clusters.

The fruit is blocky, just the right size and shape for stuffing, measuring 3 to 3½ in. in diameter and 3½ to 3¾ in. in length. It is nearly round in cross section, with 3 or 4 lobes, a well-rounded blossom end entirely without objectionable deep creases, and is glossy dark green turning bright red when ripe. The flesh is $\frac{3}{16}$ in. thick, tender, crisp, and, of course, always sweet. Ready in 67 days from time of setting out the plants.

Pkt. 15¢; ⅛ oz. 75¢; ¼ oz. $1.35; oz. $5.00.

82 Pole Bean

White Seeded Kentucky Wonder

RUST RESISTANT

64 days. A new early pole bean with distinct advantages over other varieties now offered. It is highly resistant to at least one form of the rust disease; entirely stringless when young, and even after the beans have grown to full size in the pod it has only slight strings. The seed is white. The vine is vigorous and climbs well and the foliage is dark green. Pods are 7 to 7½ in. long, thick, smoother than Kentucky Wonder, dark green, and have that unexcelled pole bean quality. Extra early for a climbing bean and productive over a long season. **Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. $1.35; 10 lbs. or more @ 25¢ per lb.**

35 Edible Soy Bean—Bansei

96 days. The soy bean is one of the most nutritious of all plant products, contains approximately 20% fat and 40% protein, and gives a tremendous yield of food from a small space.

If you have been thinking of soy beans only as feed for livestock, plant some Bansei this year and add an entirely new vegetable to your garden list in the future. They're easy to grow, fabulously productive, drought resistant, not attacked by the Mexican bean beetle, attractive on the table, and easy to eat. Soy beans may also be dried for winter use.

Plant, fertilize, and cultivate like bush limas, thinning to 1 ft. apart in the row. Pick when pods are well filled but still green. Ask for cooking instructions when ordering seeds.

316 Sweet Corn—Burpee's Delicious

91 days. Is white corn sweeter than yellow? Since it's a matter of personal taste, we can't say. However, be sure you've compared Burpee's Delicious very carefully with the best of the yellow varieties before you make your conclusions. We think that Delicious tops the white varieties for quality.

Delicious matures in about 91 days from planting. The plant grows 5 to 7 ft. tall and produces an ear 7 to 8 in. long and 1½ to 1¾ in. in diameter, filled to the top with 12 or 14 rows of pearly white kernels, closely and evenly set.

A husky, productive, and uniform plant, a most attractive ear, and, above all, the very finest table quality. We recommend Delicious sweet corn to all our customers. **Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; 5 lbs. $1.45; 10 lbs. or more @ 27¢ per lb.**

84 days. While this strain was bred by the late Dr. Ivan C. Jagger, the famous lettuce and cantaloupe breeder of California, the true use of Imperial 44 was discovered by Dr. J. E. Knott of Cornell University. Imperial 44 is a low-growing crisp head with thick, heavily savoyed, dark green leaves. The head is deep, 5 to 6½ in. in diameter, very solid, and weighs 1¼ lbs. under good conditions. Such a sensational and dependable header in the East that the supply of seed last season was far short of the demand for it. A sure header. GREEN-POD BUSH BEANS

Beans are one of the most satisfactory and productive vegetables, because they grow so vigorously and bear with such wonderful abundance. Plants grow from 15 to 20 in. tall. Do not sow seed until the weather is quite warm; in the vicinity of Philadelphia, early May is about the right time for the first sowing. A warm, well-drained, sandy loam is best suited. The pods are most delicious if picked before they have reached full size, and the plants will continue bearing much longer. To provide for a continuous supply of tender beans, seed should be sown every 2 weeks up to August 10. Plant in rows not less than 18 in. apart; space seed 2 to 3 in. apart in the row, cover with 2 in. of soil, and firm the surface to assist germination. One pkt. of seed will sow about 25 ft. of row; one lb. 150 ft.; 60 lbs. for one acre.

60 days. White-seeded, round-podded wax bean of really choice quality. Bears attractive, well-formed, 5 in. pods continuously for many weeks. The bright lemon-yellow pods are straight, brittle, meaty, tender, and entirely stringless at all stages of growth. Seeds, being large and pure white, are desirable as shell beans. The seeds of any other beans can, of course, be used for baking, but the white-seeded varieties are usually preferred for this purpose.

44 Burpee's Kidney Wax Bush Bean ⊙

52 days. Outstanding in every way. This Burpee introduction is pronounced by many the most tasty of all beans. Pods are almost straight, broad, yet quite thick, meaty, and entirely stringless at all stages of growth; 6 to 7 in. in length, ½ in. broad, ⅜ in. thick, and of a bright lemon-yellow, reflecting their tenderness and delicate flavor. Popular for canning.

The popularity of this bean is due to several important factors—pods are remarkable for their meatiness, fine flavor, brittleness, attractive clean color and their absolute freedom from strings; plants are noted for their great prolificness. They are strong growers, forming upright bushes 18 to 20 in. in height. Seeds are white with brownish black eye. **Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. $1.40; 10 lbs. or more @ 26¢ per lb.**

The straight, lemon-yellow pods are broad and flat, 5 in. long, stringless, brittle, and of good quality. Profuse bearer. Especially suitable for the home garden or early market. For the size of plant it is very productive. Other features are that it reaches the peak of its season very quickly and is immune to rust and disease. **Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. $1.40; 10 lbs. or more @ 26¢ per lb.**

Giant Butter or Fava Beans

24 Giant Butter or Fava Bean

85 days. Giant Butter or Fava Beans are much hardier than other beans and should be planted as early in the spring as the ground can be worked; they will not thrive in summer heat. Plants are large and erect, true bush form, and heavy yielders. Pods are glossy green, 7 in. long, and quite broad, and contain 5 to 7 large, broad, flat, light green beans, which are valuable for use as green shell beans. The pods are not edible; the large beans somewhat resemble Lima Beans and should be used in the same way. Becoming very popular. One pkt. will plant 15 ft. of row; 1 lb. 75 ft.; 120 lbs. for one acre. **Pkt. 10¢; ½ lb. 20¢; lb. 35¢; 2 lbs. 60¢; 5 lbs. $1.20; 10 lbs. or more @ 22¢ per lb.**

POLE BEANS

Kentucky Wonder Pole Bean

Pole Beans are extremely productive. They come into bearing later than the bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy, however, so should be planted a week later. They mature in from 64 to 80 days. Sow seed when the weather has warmed up, about the second week of May in vicinity of Philadelphia, and not later than June 15. Set poles 4 ft. apart and place 5 to 8 beans around each pole; one packet of seed is enough for 20 poles; 1 lb. of seed for 100 poles. When plants are well established, thin to 3 or 4 plants to a pole; or the seed may be planted along a trellis, sowing 300 ft. of row with 1 lb. of seed.

72 **Kentucky Wonder or Old Homestead ⊙**

65 days. We prefer this to most other green-podded pole beans. It is early, climbs well, and bears a heavy crop of large green, curved pods, 7 to 9 in. long. SHELL BEANS *(may be used either green or dried)*

Grown as dried beans for winter use. The culture is similar to that recommended for Green-Pod Bush Beans, but shell beans should be left on the vine until the pods are matured. EDIBLE SOY BEAN

35 **Bansei**

96 days. Since the recent introduction of vegetable type soy beans into this country, the demand for seed has constantly increased. These beans are not only delicious when eaten green or dry, but they are also an excellent source of Vitamins A, B, and G. The food value is very high because of the fat and protein content. The Bansei variety is one of the earliest and most productive of all and very adaptable in its growing requirements; it will produce crops in nearly any section of the country. Plants grow 24 in. high and do not require support. Seeds are bright green while young and yellow when mature. Ask for cooking instructions when ordering seed. **Pkt. 15¢; ½ lb. 35¢; lb. 60¢; 2 lbs. $1.10; 5 lbs. $2.25; 10 lbs. or more @ 40¢ per lb.**

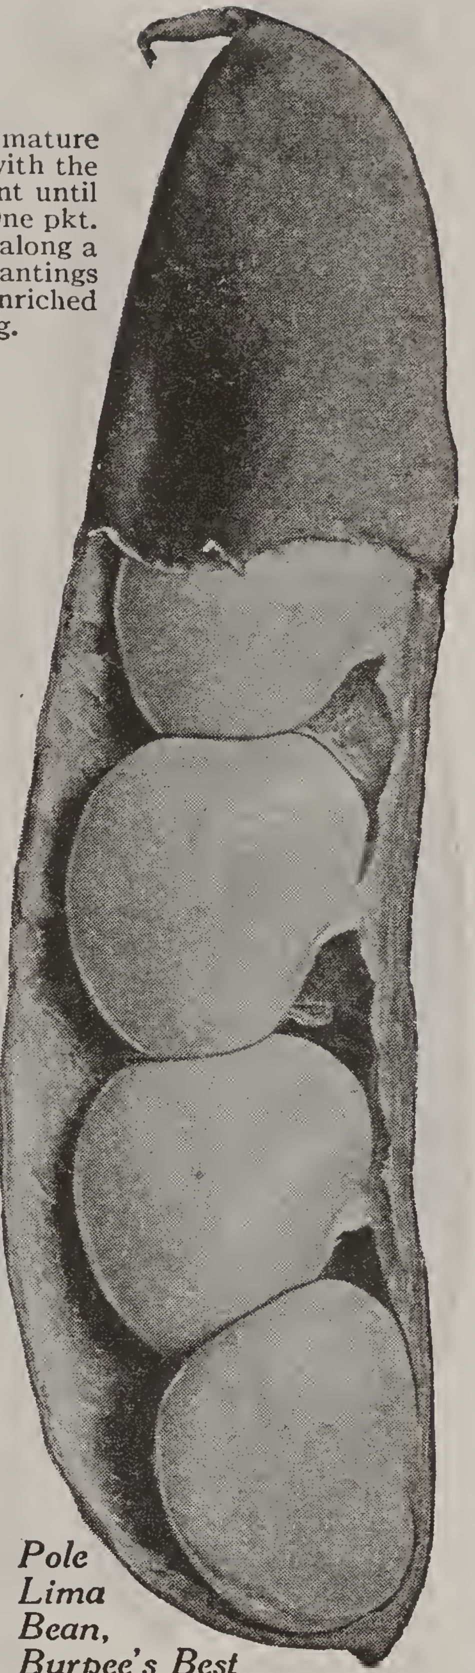
POLE LIMA BEANS

Pole Lima Beans greatly outyield the bush varieties per square foot of garden space. They mature somewhat later. Set the poles 4 ft. apart each way and place 6 to 8 seeds around each pole with the eyes down, covering with 2 in. of fine soil. Later thin to 2 or 3 plants to a pole. Do not plant until the ground is thoroughly warm, about the middle of May in the vicinity of Philadelphia. One pkt. will plant 10 poles; 1 lb. for 50 poles; 35 lbs. for one acre. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. to about 50 ft. of row. All Lima Beans prefer a warm, sandy loam soil enriched with well-rotted stable manure; wait until soil is warm and weather settled before planting.



Pole Lima Bean, Burpee's Best

105 Burpee's Best Pole Lima ⊙

92 days. The Fordhook among the pole limas. Burpee's Best has been making friends rapidly since its introduction in 1934, and we believe that it has only begun its march toward popularity. You know Fordhook Bush? Then just imagine a pole bean with all the good characteristics of Fordhook —its thick seed, straight, smooth pod, its rich tenderness, but with larger pods, and three or four times as many on each plant.

Burpee's Best will climb ten to twelve feet under average conditions, and produce pods along its entire length in clusters of 4 to 8. The pods are straight, 5 to 6 in. long, 1½ in. broad, and nearly one inch thick. Burpee's Best represents a marked improvement over Challenger Pole, and we suggest it to those who have been growing this older variety.

BUSH LIMA BEANS

Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm. The middle of May is usually safe in the vicinity of Philadelphia. Bush Limas are good yielders. Plant in a warm, well-drained, sandy loam. Plant the seeds edgewise, eye down, 5 in. apart in rows 2½ to 3 ft. apart, and cover 2 in. deep with fine soil. Later thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties, such as Philadelphia Bush, Wood's Prolific, and Jackson Wonder. Keep the soil well cultivated, and pick the pods as soon as the beans have reached edible size. One pkt. of seed will sow 25 ft. of row; one lb. 100 ft.; 60 lbs. to an acre.

65 Burpee's Fordhook Bush Lima ⊙

Introduced by Burpee and named for Burpee's Fordhook Farms

75 days. Burpee's Fordhook Bush Lima Bean is known and grown wherever beans are planted. It is a Burpee introduction that vies with Burpee's Improved Bush Lima for first place in quality and popularity. Burpee's Fordhook Bush Lima is in a class by itself, and is altogether unique. Nothing like it has ever been grown. It is a bush type of the popular "Potato" Lima; strong and erect and never prostrate or running. The stalks that produce the blossoms are thrown out from the lateral and main stalks, and the pods are borne in "clusters" of from 4 to 8 each. The individual pods are 4 to 5½ in. long, 1¼ in. wide, and as much as ¾ in. thick. Each pod usually holds 4 large, plump beans which remain green for a long time.

The flavor of Fordhook is delicious, not unlike chestnuts. The plants grow 20 to 30 in. tall and make a spread of almost 2 ft. On our own Seed Farms we grow enormous quantities of this bean which we ship to our customers in every state in the Union. Sales are heavier each year due to the ever-increasing popularity of Fordhook Bush among home gardeners and market growers. For a Pole Lima of the Fordhook type, plant Burpee's Best.

64 McCrea Bush Lima (Miniature Fordhook)

76 days. McCrea Bush is just what we have been waiting for—a Miniature Fordhook. To give an idea of the size of the beans themselves—the Fordhooks listed above are so large that 22 seeds will weigh one ounce. The McCrea is so small that it takes 70 seeds to weigh one ounce. While the seed itself is small, the plant is nearly as large as Fordhook. Plants are stocky, erect, dark green, of medium season, and a heavy yielder of pods which are rather thick, slightly curved, and contain from 3 to 5 plump green beans of true potato type. The unusually delicious flavor of this Miniature Lima and the fact that the beans retain a green tint when cooked have already made it a popular favorite with home and market gardeners. Canners, too, have found it most desirable, for the plump, thin-skinned beans have an unusually sweet flavor, different from any other lima, and they do not break up in the can. As they retain their green color when cooked, they make a nice appearance when served. **Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. $1.55; 10 lbs. or more @ 29¢ per lb.**

68 days. Of special value because it is the largest-seeded bush lima that produces well under dry, hot conditions. Upright plants bear an abundance of pods from 4 to 4½ in. long, each containing 3 or 4 medium-sized beans. McCrea Bush Lima (Miniature Fordhook)

63 Burpee's Improved Bush Lima Bean ⊙

Another World Famous Burpee Introduction

75 days. The best of the flat-seeded bush limas, and a decided improvement over Burpee's Bush. The seeds and pods are larger, and the plants are more productive. Plants of Burpee's Improved are large and vigorous, meeting in a three-foot row under average conditions. They are of true bush habit, but when well grown will send out lateral, pod-bearing branches which rarely exceed 18 in. in length and do not require support. Pods are 4½ to 5½ in. long, and 1 to 1⅛ in. broad, slightly curved and moderately thick, containing 4 or 5 very large beans of attractive appearance and fine quality.

Burpee's Improved is popular where a lima with a somewhat flatter seed than Fordhook is demanded. It is easy to shell. Distinct enough from Fordhook in shape and flavor, it supplements rather than competes with that excellent variety. Try both kinds in your garden this season. You can't go wrong with either. **Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; 5 lbs. $1.45; 10 lbs. or more @ 27¢ per lb.**

Burpee's Bush Lima

60 Burpee's Bush Lima

78 days. The original dwarf, large-seeded Bush Lima. First introduced exclusively by Burpee in 1890. It is an immense yielder. The pods and beans, however, are not so large, nor are the bushes so prolific, as those of the Burpee Improved Bush Lima. The bushes, 18 to 24 in. tall, are of stout, erect growth, yet branching so vigorously that each plant develops into a rounded plant about 2 ft. in diameter. Pods grow 4½ to 5 in. long and contain 3 or 4 large beans of excellent quality.

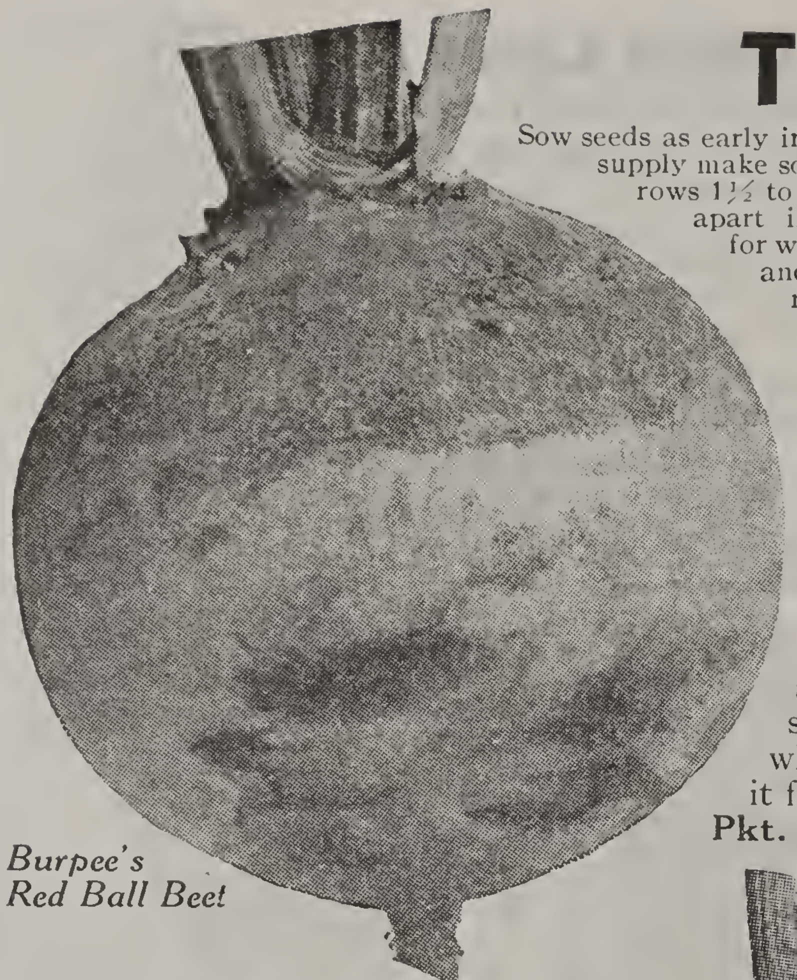
Follow the Bull's Eye We have used this mark ⊙ for years to guide the gardener in the selection of varieties which we believe will give the best results under varied conditions of soil and climate. This mark ⊙, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the **best of their class.** If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most reliable under all conditions.

TABLE BEETS

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make sowings 3 to 4 weeks apart up to the end of July. Sow seed in rows 1½ to 2 ft. apart and cover 1 in. deep. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best beets for winter storing. Gather the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use. Beet tops are used quite extensively for "greens." One pkt. of seed will sow 25 ft. of row; one oz. for 100 ft.; use 4 to 6 lbs. for an acre.



Burpee's Red Ball Beet

121 Burpee's Red Ball ⊙

60 days. Red Ball is an early beet remarkable for its uniform shape, deep colored flesh, and fine sweet flavor. The roots are perfectly globe-shaped, growing to 3 in. in diameter and having a smooth, deep red skin. The flesh is also extremely dark red, free from woody fiber, and very tasty. The quality is always the finest. Desirable for home or market. The perfectly globe-shaped roots are smooth, of uniform shape and size, with slender tap-roots. Tops are medium size and just right for bunching. The flesh is tender, fine grained, exceptionally sweet; the dark red color well retained when the beets are cooked. Quality is always the finest. 272 BURPEE'S FORDHOOK CELERY

Burpee's Fordhook Celery has a most delicious, crisp, nutty flavor unequalled by any other variety. It is, without question, the best fall and winter celery.

The stalks are unusually thick, always crisp and juicy, and entirely free from stringiness. When blanched, they are a beautiful silvery white with a full tender heart showing a tinge of light buttery yellow.

Plants are stocky, upright and 15 to 18 in. high. Because of their medium height and compact growth, they are more easily blanched than taller varieties. Fordhook is one of the best keepers of all celery; plants will remain in perfect condition throughout the winter and way into the following spring.

More Fordhook Celery is being grown now than ever before; its flavor, quality and tenderness cannot be surpassed. Try it.

Our special strain of Fordhook Celery is grown on our Western farms, where soil and climatic conditions are ideal for the production of plump, vital seeds. All plantings are made from yearly selections to maintain the high quality for which our strain is noted.

CAULIFLOWER

Cauliflower is one of our choicest vegetables. For an early crop, start the seed indoors or under glass in late February and set plants into the garden when soil has become warm. For a main or fall crop, sow the seed during June and set plants out in early July. It takes about 30 to 40 days for the plants to grow large enough for setting into the field. One pkt. of seed will produce about 150 plants; 1 oz. 4000 plants; 2 ozs. for one acre. Days to maturity are from field setting of plants. Treat seed with Semesan to prevent damping off.

253 Burpeeana ⊙

82 days. This is Super Snowball as offered by Burpee. It stands out as the most valuable cauliflower. In tests of the Pennsylvania State College it appeared as the best of all strains, maturing just as early as Burpee's Fordhook. CARROTS

Sow seed thinly in shallow drills early in the spring in rows not less than 12 in. apart. Make succession sowings every two weeks up to the early part of July. When well started, thin the small early varieties to stand 2 in. apart in the row and the larger later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest carrots. Cultivate throughout the season to insure smooth straight roots. For winter storing, sow about the middle of June, which will make full size roots before cold weather sets in. 1 pkt. of seed will sow 50 ft. of row; 1 oz. 200 ft. 3 lbs. for one acre.

CELERY

Burpee's Fordhook Celery

For the earliest crop, start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. Plants will be ready for setting in rows in July. Celery requires a rich, well-manured soil and plenty of moisture so that it can make a continuous growth. Soil, boards, or celery paper may be used to blanch the stalks. One pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants; 4 ozs. for one acre. Days to maturity are from field setting of plants. Treat seed with Cuprocide or Semesan.

272 Burpee's Fordhook ⊙

The Finest Flavored Celery

130 days. Burpee's Fordhook Celery is, without question, the finest fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a tender full heart in the center. Always tender, crisp, without strings, and juicy. The time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. Our special strain of this celery is grown on our Western farms, where conditions are ideal for the production of plump, vital seeds. Yearly selections of outstanding plants are made in order to maintain the high type and purity of the variety. **Pkt. 25¢; ½ oz. 35¢; oz. 60¢; 4 ozs. $1.85; ½ lb. $3.45; lb. $6.25.**

262 Burpee's Golden Self-Blanching ⊙

Selected French-Grown Seed—Original Dwarf Strain

120 days. The plants make a compact, dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The quality of this variety is superb. The stalks and heart are crisp, solid, heavy, free from any strings, and of the most delicious flavor. It is a standard market and shipping variety, growing 14 to 18 in. tall. Imported seed grown especially for us by one of the best growers in France. **Pkt. 20¢; ½ oz. 45¢; oz. 85¢; 4 ozs. $2.60; ½ lb. $4.80; lb. $8.75.**

260 Golden Self-Blanching

115 days. This is the American-grown seed produced from the dwarf French-grown stock. It exhibits all the excellent qualities of the original, and is sown extensively by home gardeners as well as by market growers. The plants are heavy and solid. The heart is a light golden color; tender and crisp; nutty flavor. **Pkt. 15¢; ½ oz. 45¢; oz. 80¢; 4 ozs. $2.40; ½ lb. $4.40; lb. $8.00.**

266 White Plume

Not suitable for winter storage. **Pkt. 10¢; ½ oz. 20¢; oz. 30¢; 4 ozs. 90¢; ½ lb. $1.40; lb. $2.50.**

Burpee's Golden Self-Blanching Celery

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the field. Of course, the time is average and some variation is to be expected, depending on the season and locality.

268 **Golden Plume Celery** ⊙

115 days. Also called **Wonderful,** a name that is most appropriate for this splendid early celery. Some gardeners consider it the best early celery in existence. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a thick, full, creamy heart; stalks blanch readily. Fine for home and market garden. Sweet flavor; tender and crisp. **Pkt. 10¢; ½ oz. 30¢; oz. 55¢; 4 ozs. $1.65; ½ lb. $3.00; lb. $5.50.**

270 **French Special Golden Plume**

110 days. An unusually thick-set, compact celery, 10 days earlier than Golden Self-Blanching; has no soft stalks, and is free from strings. The rib is 9 to 10 in. to the first joint. Being solid and firm, it is less liable to damage by heat or cold. Plants are medium size and stocky. The full-hearted, thick, solid stalks bleach readily and are of the finest table quality. A most desirable celery for market and home use. **Pkt. 25¢; ½ oz. 65¢; oz. $1.20; 4 ozs. $3.60; ½ lb. $6.60; lb. $12.00.**

267 **Easy Blanching**

125 days. A second-early celery which will be ready for use soon after Golden Self-Blanching. Plants make a vigorous, upright yet compact growth, and the stalks are easily blanched. They are thick, solid, heavy, unusually meaty, pure white, crisp, altogether free from any fiber or strings, and of extra-fine flavor. Hardier than Golden Self-Blanching. **Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. $1.20; ½ lb. $2.20; lb. $4.00.**

282 **Giant Pascal** ⊙

135 days. Considered by many the standard winter celery. The plants are productive, with tall, upright leaves of a rich dark green color. The stalks are tall and thick. They are broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. It will keep in perfect condition throughout the winter months. **Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. $1.15; ½ lb. $1.80; lb. $3.25.**

276 **Utah or Golden Crisp**

275 **Winter Queen**

120 days. One of the finest dwarf winter celeries we have ever grown. It resembles Golden Self-Blanching in height and habit, but the leaves are a rich green color and in this respect are not unlike those of Giant Pascal. As it blanches quickly it is ready for home or market much earlier in the fall. The plants make stout bunches of extra-heavy stalks with very large, tightly folded, creamy white hearts. **Pkt. 10¢; ½ oz. 20¢; oz. 30¢; 4 ozs. 90¢; ½ lb. $1.40; lb. $2.50.**

Celeriac

CELERIAC

or Turnip-Rooted Celery

293 **Giant Prague**

120 days. The edible portion is the large, thick root, which is highly valued boiled, or is used in vegetable soup, stews, and other dishes. Celeriac grows best in a moderately moist yet well-drained soil, which is fairly rich in barnyard manure. Frequent cultivation is necessary and occasional waterings are desirable. Start the seed in boxes indoors, and when the seedlings are large enough to be handled, transplant into the garden to stand about 8 to 10 in. apart each way. Use when the roots are of moderate size. Does not require blanching. The flavor of celeriac is similar to that of celery. Highly appreciated in European countries, and becoming most popular in the United States; more so when it becomes better known. **Pkt. 10¢; ½ oz. 20¢; oz. 30¢; 4 ozs. 85¢; ½ lb. $1.25; lb. $2.25.**

SWEET CORN

Plant the seed after all danger of frost has passed, in rows 2½ to 4 ft. apart, spacing the seeds 4 to 6 in. apart in the row, and thinning later to 12 inches; or plant in hills 3 to 4 ft. each way, allowing 2 to 4 plants to remain in each hill, depending on the fertility of your soil. For a continuous supply, sow varieties which mature in succession; also make succession sowings every 10 to 14 days until July 10—Sweet Corn maturing in the cool fall weather is excellent. Corn should be planted in blocks rather than in a single long row, since pollination and the development of a full set of kernels is then insured. One pkt. of seed will plant 100 ft. of row; 1 lb. 350 ft.; 12½ lbs. for one acre.

CUCUMBERS

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing in late June or early July to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure in the hills and a side-dressing of commercial fertilizer are usually beneficial. Plant in hills 4 or 5 ft. apart, placing 8 to 10 seeds in each hill, and cover with ½ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a hill. One pkt. of seed will plant 15 hills; 1 oz. 50 hills; 2 lbs. for one acre. If seed is drilled, one acre requires about 4 lbs. of seed. Control cucumber insects with Red Arrow Garden Spray and Slug Shot Dust. Treat seed with Cuprocide. See page 125 for explanation of white spine and black spine.

Iceberg is exceedingly vigorous and hardy, so that it will withstand quite hot weather; it is well suited to Eastern and Mid-Western growing conditions for this reason. This is the original Iceberg Lettuce introduced by Burpee in 1894. It should not be confused with New York Improved, which is grown in certain Western sections under the name "Iceberg." **Pkt. 10¢; oz. 15¢; 4 ozs. 45¢; ½ lb. 70¢; lb. $1.15; 2 lbs. $2.10; 5 lbs. $5.05.**

WATERMELONS

Rich, rather sandy soils produce the finest crops of watermelons, but a well-drained loam, especially with a southern exposure, is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil under each hill. Watermelons should not be planted until the weather is quite warm. The hills should be about 6 to 8 ft. apart. Place 6 to 8 seeds in a circle in each hill, and cover ½ in. deep with fine soil. Thin to 2 or 3 plants in each hill. Larger and better watermelons can be obtained if all but 2 or 3 are removed from each vine. One pkt. will plant 12 hills; 1 oz. 25 hills; 3 to 4 lbs. for one acre. In northern states, plant Burpee's Fordhook, Cole's, or Early Northern Sweet.

611 Burpee's Halbert Honey ⊙

Skin color is a beautiful deep green with fine veining, and the flesh is bright crimson, crisp, and of a remarkably luscious flavor. Rind is thin, making this melon unsuitable for long distance shipping, but few varieties can compare favorably with it for home use or for nearby markets. A really high quality melon from every standpoint, which is worthy of a trial by those who are not already acquainted with it. Seeds are pure white tipped with black. **Pkt. 10¢; oz. 15¢; 4 ozs. 35¢; ½ lb. 55¢; lb. 90¢; 2 lbs. $1.60; 5 lbs. $3.80.**

Please write for quotations on large quantities as prices vary with the market. One lb. of onion sets will plant 100 ft. of row; 250 to 325 lbs. are needed for one acre. Plant as early in the spring as possible.

9969 Ebenezer or Japanese ⊙

These sets are of the highest type. They are produced under ideal conditions from a select strain of seed, carefully screened and graded, and stored at the proper temperature until used. Ebenezer is one of the best of all winter keepers and, therefore, much used by large growers. Produces medium sized bulbs, flattened globe in shape, and light golden brown in color. The flesh is yellowish white. **Lb. 25¢; 2 lbs. 40¢; 5 lbs. or more @ 17¢ per lb.**

9967 Yellow Sets

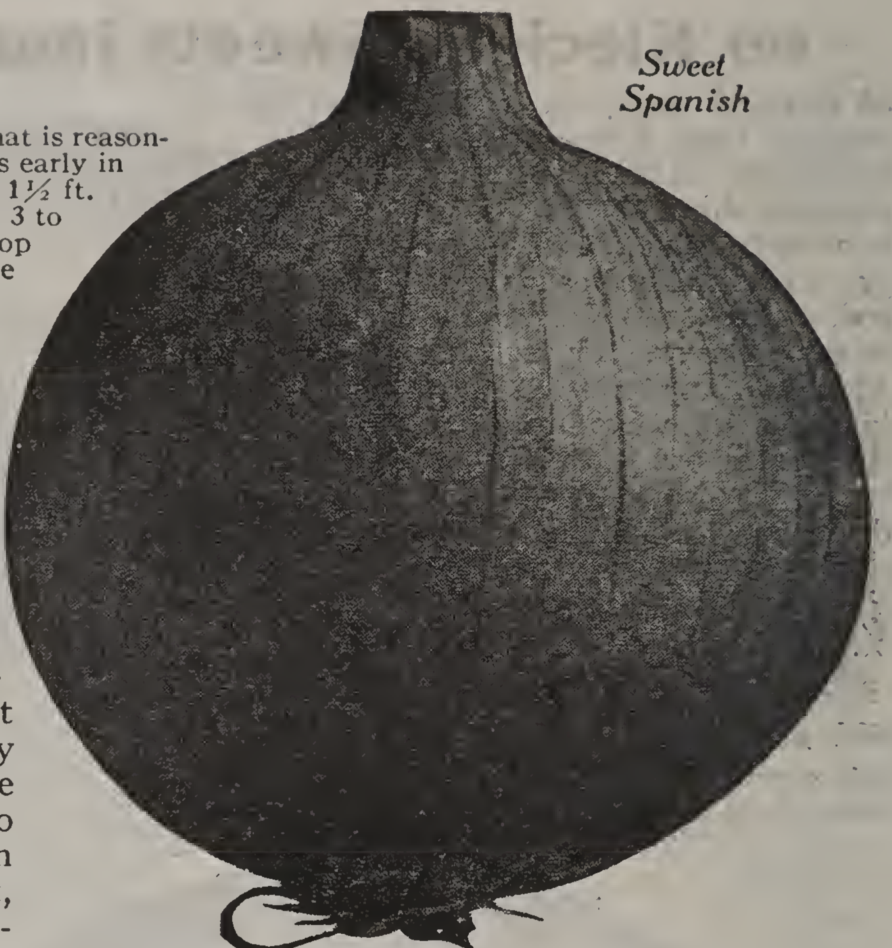
ONIONS

The soil best suited to grow a good crop of onions is one that is reasonably fertile, well drained, and well prepared. Sow seed as early in the spring as the ground can be worked; space rows 1 to 1½ ft. apart. Cover the seed lightly, and when the seedlings are 3 to 4 in. tall, thin them to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. One pkt. of seed will sow about 50 ft. of row; 1 oz. 200 ft.; 4 to 5 lbs. one acre. Japanese Bunching and White Welsh, which are used as green onions or scallions, are best planted in July for harvest the following spring.



Sweet Spanish

682 Sweet Spanish ⊙

Utah Strain

110 days. The large, globe-shaped Spanish Onions, which are sometimes incorrectly called "Bermudas," are exceptionally mild and sweet—excellent for eating raw or boiled. Utah Sweet Spanish grows to very large size, is remarkably uniform, globular, light yellow skin and pure white, firm, crisp, and tasty flesh. Although no onions of this type will keep as well as American types, such as Yellow Globe Danvers, Southport, or Ebenezer, Utah Sweet Spanish will stand shipping and storage for short periods better than Prizetaker, Gibraltar or the Bermuda varieties. Onions of the Spanish type grow to the largest size when they are planted to form their bulbs during the short days of spring or fall. In northern states, seed is usually started indoors.

PEPPERS

Pepper seed should be sown in a hotbed or in a shallow box in a warm place in the house, allowing 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is past. Peppers prefer a moderately light, well-fertilized soil. They should be set in rows 2 to 3 ft. apart, spaced 18 to 24 in. apart in the row. One pkt. of seed will produce about 100 plants; 1 oz., 1500 plants; 4 to 6 ozs. will produce enough plants for one acre. Days to maturity are from field setting of plants. Treat seed with Cuprocide or Semesan to prevent damping off.

RADISHES

If your garden includes some of each of the three different classes of radishes—spring, summer, and winter varieties—it will easily keep you supplied with this refreshing vegetable practically all year around. A moderately light soil produces the smoothest and best roots. Sow the seed as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering ½ in. deep. Thin plants to stand 1 to 1½ in. apart in the row. Make succession plantings every week until early summer, then resume one month before frost. This applies to **spring** and **summer** radishes; seed of **winter radishes** is not sown until June. One pkt. will sow about 20 ft. of row; 1 oz. 100 ft.; 10 to 12 lbs. for one acre.

886 Crimson Giant Globe

29 days. Sweet, crisp, juicy, brittle, and a wonderful yielder. A fine large, bright red radish. This radish differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a large globe, 2 in. in depth, 1½ in. in diameter, with thin, tender skin of deep crimson, and solid white flesh. It is a very popular variety, of large size and the finest quality. Early, notwithstanding its size. Sow seed thinly to permit full development of the roots, and for the largest radishes see that the soil is fertile and deeply prepared. **Pkt. 10¢; oz. 15¢; 4 ozs. 30¢; ½ lb. 50¢; lb. 85¢; 2 lbs. $1.55; 5 lbs. $3.60; 10 lbs. $6.35.**

Small round roots, 1¼ in. in diameter, with bright scarlet top, a clear white base, and small, slender tap-root. The juicy flesh is pure white and of an agreeable snappy flavor. Our stock of this popular variety is perfectly uniform and remarkably fine. While the white-tipped Scarlet Turnip Radish has long been a favorite, the Sparkler strain is unusually desirable. A very attractive radish for bunching or market. **Pkt. 10¢; oz. 15¢; 4 ozs. 30¢; ½ lb. 45¢; lb. 75¢; 2 lbs. $1.35; 5 lbs. $3.20; 10 lbs. $5.60.**

TOMATOES

Tomatoes should be in every garden. It is quite simple to grow your own plants. Sow the seed in a hotbed, or in a shallow box in the house, allowing 5 to 6 weeks to produce plants large enough for setting outdoors when weather becomes warm. Sow in rows 3 in. apart and cover with ¼ in. of soil. When plants are about 2 in. tall, transplant to stand 4 in. apart in the row or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past, in rows 4 ft. apart and 3 or 4 ft. apart in the row. One pkt. will produce about 300 plants; 1 oz. 2000 plants; 2 ozs. will produce enough plants for one acre. Days to maturity are from field setting of the plants. Treat seed with Semesan or Cuprocide to prevent disease.
